Automated SKIN PACKAGING SYSTEM

Ampak's Automated Skin Packaging System Increases Employee Productivity and Accuracy

The Automated Skin Packaging System integrates the E-Z Infeed and E-Z Outfeed to automate several of the manual steps of a skin packaging line. Reduce employee count, increase cycle time, and with the optional Stationary Template attachment, position your product accurately on the substrate.

The finished package is delivered to the end of the system at working height for additional processing. The Automated Skin Packaging System is also available in the larger Master Series of Ampak Skin Packaging Systems.

Backed by Heat Seal's Quality, Commitment and Pride, You can count on Ampak's legendary reliability to increase your productivity.

For more detailed information and video, go to www.heatsealco.com.

The Automated Skin Packaging System includes three component machines:

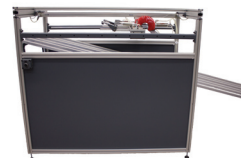

E-Z INFEED

- Power and Controls from host Shipmate
- Soft-Start Eliminates Product Movement
- Optional Stationary Template for Loading Accuracy and Speed
