

# A HEATSEAL Innovation

*did the work, so you won't have to!*

Heat Seal is dedicated to manufacturing and providing the highest quality equipment. We are constantly looking for ways to improve the efficiency and value of our machines and parts.

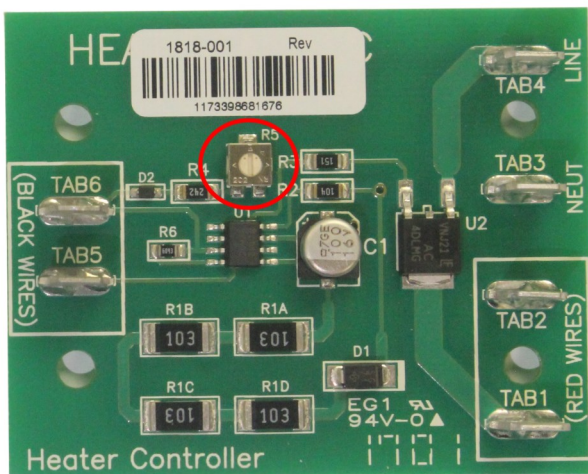

Therefore, we are proud to announce our latest innovation—an upgrade to Control Board 1818-001!

This enhancement will:

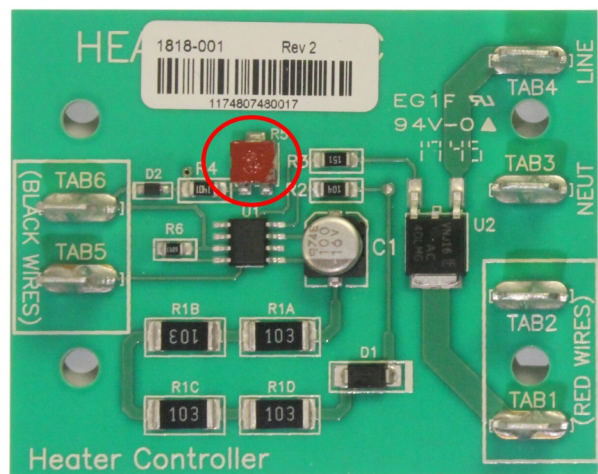

- Allow cutoff rod to accurately heat to optimal film cutting temperature (within 280°F and 305°F)
- Lower maintenance costs
- Extend machine service life
- Prevent cutoff rod from overheating
- Decrease the chance of film smoking

All 1818-001 Control Boards (shipped as parts and installed in machines) will be precisely set to regulate the heat cycle of the hot rod. We are securing this setting with a red tamper evident seal.
